Distance, Speed & Time: Fractional Trips and Average Speed Word Problems

Student: Declan Jee **Date:** 2026-04-16 **Difficulty:** Mid — Challenge

Standard: *CCSS.MATH.CONTENT.6.RP.A.3.B & 7.RP.A.1 — Solve unit-rate problems involving distance, speed, and time, including problems where portions of a trip are described as fractions of the total distance.*

> *Read each problem carefully. Show all work, including the formulas you use (*Distance = Speed × Time, Average Speed = $\frac{\text{Total Distance}}{\text{Total Time}}$*). Write the final answer with proper units.*

3 hours

X | 24 | 22 | Y

8 km/h

3 hours 2 hours

$\frac{36}{2}$

1. Mid

Maya took 5 hours to cycle from Town X to Town Y. She cycled $\frac{2}{5}$ of the distance in the first 3 hours. She cycled the remaining distance in the last 2 hours. If her average speed for the first part of the trip was 8 km/h, find her average speed for the last part of the trip.

$\frac{2}{5}$ $\frac{3}{5}$

$\frac{36}{2}$

24 km

60 km

Answer: 18 **km/h**

2. Mid

Lily and Max traveled from Port A to Port B. Lily left Port A at 7:15 a.m. Max left Port A $1\frac{1}{2}$ hours later. They both reached Port B at 11:45 a.m. If Lily's average speed for the trip was 48 km/h, find Max's average speed.

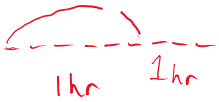
$\frac{230 \text{ min}}{4.81.6}$ 4 hrs 30 min

4.8|27. 3 hrs

$\frac{9}{1.6}$

Answer: _____ **km/h**

Ben jogged from Park P to Park Q. He covered $\frac{2}{9}$ of the trip in the first hour and $\frac{1}{3}$ of the trip in the second hour. He took 3 more hours to jog the remaining 24 km. Find his average speed for the whole trip.



Answer: _____ **km/h**

4. Mid

Jake drove from Town M to Town N. He took 4 hours to travel $\frac{2}{3}$ of the trip. He took 2 hours to travel the remaining 60 km.

- (a) Find the distance between the two towns.
- (b) Find his average speed for the whole trip.

(a) _____ **km** **(b)** _____ **km/h**

---

5. Challenge

A truck driver traveled from City P to City Q. After traveling $\frac{1}{3}$ of the trip at an average speed of 30 km/h, he continued to travel another 200 km to reach City Q.

- (a) Find the distance between the two cities.
- (b) If his average speed for the whole trip was 50 km/h, find his average speed for the last $\frac{2}{3}$ of the trip.

(a) _____ **km** **(b)** _____ **km/h**

---

6. Challenge

Train A leaves City X at 9:00 a.m. and travels at 80 km/h toward City Y. Train B leaves City Y at 10:30 a.m. and travels at 100 km/h toward City X along the same track. The two cities are 510 km apart. At what time do the two trains meet?

Answer: _____

7. Mid

Mr. Tan drove from Town A to Town B in 6 hours. He drove at 60 km/h for the first 4 hours and at 90 km/h for the remaining 2 hours. What fraction of the journey did he cover in the first 4 hours? Express your answer in simplest form.

Fraction: _____

8. Challenge

Anna walked from her house to the library. She walked the first half of the distance at 4 km/h, then the second half at 6 km/h. Her total walking time was 25 minutes. Find the distance from her house to the library.

Distance: _____ **km**

9. Challenge

Steve drove from his home to a friend's house at an average speed of 40 km/h. He returned home along the same route at an average speed of 60 km/h. If his total travel time was 5 hours, find the distance from his home to his friend's house.

Distance: _____ km

10. Challenge

Carlos cycled from village V to village W in 4 hours. After cycling $\frac{3}{5}$ of the way, he had cycled 24 km more than the remaining distance. Find his average speed for the whole trip.

Average speed: _____ km/h
